

WHAT IS CLAIMED IS

5
SJ
AJ

1. A telephone set identifying method for identifying a type of portable telephone set to which a data processing apparatus is coupled, comprising the steps of:
 - 10 identifying the type of the portable telephone set based on a response with respect to an operation start signal which is output to a data interface part of the portable telephone set.
- 15
2. A telephone set identifying method for identifying a type of portable telephone set to which a data processing apparatus is coupled, comprising the steps of:
 - 20 identifying the type of the portable telephone set based on a waveform of a signal output from a specific terminal of a data interface part of the portable telephone set.
- 25
3. A telephone set identifying method for identifying a type of portable telephone set to which a data processing apparatus is coupled, comprising the steps of:
 - 30 identifying the type of the portable telephone set based on an allocation pattern of input and output terminals of a data interface part of the portable telephone set.
- 35

- SAC*
4. A telephone set type identifying apparatus for identifying a type of portable telephone set to which a data processing apparatus is coupled, comprising:
5 means for identifying the type of the portable telephone set based on a response with respect to an operation start signal which is output to a data interface part of the portable telephone set.

10

5. A telephone set type identifying apparatus for identifying a type of portable
15 telephone set to which a data processing apparatus is coupled, comprising:
means for identifying the type of the portable telephone set based on a waveform of a signal output from a specific terminal of a data interface part of
20 the portable telephone set.

- 25 6. A telephone set type identifying apparatus for identifying a type of portable telephone set to which a data processing apparatus is coupled, comprising:

- means for identifying the type of the portable
30 telephone set based on an allocation pattern of input and output terminals of a data interface part of the portable telephone set.

35

7. A PC card comprising:

a telephone set type identifying apparatus identifying a type of portable telephone set to which a data processing apparatus is coupled,

5 said telephone set type identifying apparatus comprising:

means for identifying the type of the portable telephone set based on a response with respect to an operation start signal which is output to a data interface part of the portable telephone

10 set.

15 8. A PC card comprising:

a telephone set type identifying apparatus identifying a type of portable telephone set to which a data processing apparatus is coupled,

20 said telephone set type identifying apparatus comprising:

means for identifying the type of the portable telephone set based on a waveform of a signal output from a specific terminal of a data interface part of the portable telephone set.

25

9. A PC card comprising:

30 a telephone set type identifying apparatus identifying a type of portable telephone set to which a data processing apparatus is coupled,

said telephone set type identifying apparatus comprising:

35 means for identifying the type of the portable telephone set based on an allocation pattern of input and output terminals of a data interface part

of the portable telephone set.

A/S

10. A computer-readable storage medium which stores a program for causing a computer which couples to a portable telephone set to identify a type of the portable telephone set, comprising:
means for causing the computer to identify the type of the portable telephone set based on a response with respect to an operation start signal which is output to a data interface part of the portable telephone set.

15

11. A computer-readable storage medium which stores a program for causing a computer which couples to a portable telephone set to identify a type of the portable telephone set, comprising:
means for causing the computer to identify the type of the portable telephone set based on a pattern of an asynchronous signal output from a data interface part of the portable telephone set.

30

12. A computer-readable storage medium which stores a program for causing a computer which couples to a portable telephone set to identify a type of the portable telephone set, comprising:
means for causing the computer to identify the type of the portable telephone set based on an allocation pattern of input and output terminals of

a data interface part of the portable telephone set.

7091230 Inv

13. A processing apparatus operatively coupled between a communication equipment and an information processing apparatus, comprising:

10 an identifying part identifying a type of the communication equipment and outputting an identification signal; and

15 a switching part switching a communication protocol prestored for each type of the communication equipment, based on the identification signal.

20

14. The processing apparatus as claimed in claim 13, wherein the communication equipment is a mobile communication equipment.

25

15. The processing apparatus as claimed in claim 14, wherein the mobile communication is a mobile telephone set capable of making a communication while moving or a personal handy-phone system telephone set unsuited for making a communication while moving.
